Boarding House Management System

System Audit: Frontend vs. Backend Dimensions Report

Date: October 12, 2026
Document: Technical Gap Documentation
Status: Audit Complete

EXECUTIVE SUMMARY

This document lists all features, attributes, and data fields that are fully designed and interactive in the **Frontend (Vue 3)** but are **Missing in the Backend (Django REST Framework)**.

1. Entire Features Missing in Backend

0% in Django

Maintenance Ticketing System

NOT IN BACKEND

Residents submit tickets across 5 categories (Plumbing, Electrical, Aircon, Wi-Fi, Carpentry) and landlords manage statuses (Pending, In Progress, Resolved).

Online Viewing Inquiries (Lead Capture)

NOT IN BACKEND

Public room exploration page has a booking modal for visitors to submit name, phone number, target move-in date, and notes. No database table or endpoint exists in Django.

2. Room Information Missing in Backend

Backend only has Room Number

Room Photos & Multi-image Galleries

NOT IN BACKEND

Main hero photos and thumbnail gallery carousels for each room. Backend currently has no image or media fields.

Room Category & Floor Level

NOT IN BACKEND

Categorization by AC vs. Standard Fan, and Floor location (Ground Floor vs. 2nd Floor) used for live filtering.

Gender Policy & Starting Rent Price

NOT IN BACKEND

Policies (Male Only, Female Only, Co-ed) and base monthly starting rates (e.g. ₱3,500/month).

Amenities List & Room Description

NOT IN BACKEND

Tags for amenities (Inverter AC, Study Desks, Private Bath, Lockers, Wi-Fi 6) and descriptive overview copy.

3. Tenancy, Move-Out & Billing Gaps Operational Logic

Lease Status & Move-Out Date NOT IN BACKEND
Tracking whether a lease is Active or Terminated, and record of Check-out date. In backend, tenancies can only be hard-deleted, which is blocked by Django if invoices exist.

Invoice Due Date & Payment Status NOT IN BACKEND
Invoices lack a Due Date and computed Status (Paid, Partial, Unpaid). In backend, invoices only store the billing month.

Payment Reference Numbers & Verification NOT IN BACKEND
GCash reference codes or bank transaction numbers, and verification statuses (Verified vs. Pending Review).

1-Click Batch Monthly Billing NOT IN BACKEND
Frontend feature that automatically creates monthly invoices with rent + estimated electric + water for all active tenants at once.

User Profile Avatar Photos NOT IN BACKEND
Profile pictures for residents and landlords displayed in user menus and occupant cards.

4. Summary Comparison Table

Feature / Dimension	In Front End	In Back End	Status / Impact
Maintenance Requests	YES	NO	Complete module missing in Django
Viewing Inquiries	YES	NO	Public lead capture missing in Django
Room Photos & Galleries	YES	NO	No image fields or storage in Django
Room Category (AC / Fan)	YES	NO	Missing attribute on Room model
Room Floor & Gender Policy	YES	NO	Missing attributes on Room model
Room Starting Rate & Amenities	YES	NO	Missing attributes on Room model
Tenancy Status & Check-out Date	YES	NO	Cannot end lease without deleting billing records
Invoice Due Date & Status	YES	NO	Backend only has billing month
Payment Reference Number	YES	NO	No GCash / Bank reference tracking in Django
User Profile Picture	YES	NO	No avatar field on Accounts model
1-Click Batch Monthly Invoicing	YES	NO	No batch generation endpoint in Django
